

Thomas DeMasse - 7/13/23 - Fundamentals

2.)

$((00)^* (11)^* \cup (01))^*$

Final NFA  $((00)^* (11)^* \cup (01))^*$

$$3.) L = \{ abab a^2, a^2 ba^2 ba^3, a^3 ba^3 ba^4 \dots \}$$

Divide the string  $abab a^2$  into 3 parts.  
 $x = a, y = ba, z = ba^2$

$$|y| > 0 \Rightarrow |z| > 0 \text{ (true)}$$

$$|xy| < P \Rightarrow |3| < 6 \text{ (true)}$$

$$xy^i z \Rightarrow a(ba)^0 ba^2 \Rightarrow a ba^2 \notin L \quad (i=0) \Rightarrow \text{False}$$

$ab a^2$  is not in  $L$

$$4.) A/LA = \{01\}$$

$$S_A \rightarrow 01$$

$$V = \{S_A\}$$

$$\Sigma = \{0, 1\}$$

$$R = \{S_A \rightarrow 01\}$$

$$S = S_A$$

The CFG of  $LA$  is:

$$(\{S_A\}, \{0, 1\}, \{S_A \rightarrow 01\}, S_A)$$

$$L_B = \{0^n 1^n \mid n \geq 0\}$$

$$S_B \rightarrow 0^n 1^n \rightarrow 0s_1 1 \mid \epsilon$$

$$V = \{s_B\}$$

$$\Sigma = \{0, 1\}$$

$$R = \{s_B \rightarrow 0s_1 1 \mid \epsilon\}$$

$$S = s_B$$

The CFG of  $L_B$  is:

$$(\{s_B\}, \{0, 1\}, \{s_B \rightarrow 0s_1 1 \mid \epsilon\}, s_1)$$

Concatenation:  $V = \{s_A, s_B\}$

$$\Sigma = \{0, 1\}$$

$$R = \{s_A \rightarrow s_A s_B\}$$

$$S = s_1$$

Four-Tuple:  $(\{s_A, s_B\}, \{0, 1\}, \{s_A \rightarrow s_A s_B\}, s_1)$

(B) Step 1: New Start Symbol

$$N \rightarrow S$$

$$S \rightarrow s_A s_B$$

$$s_A \rightarrow 01$$

$$s_B \rightarrow 0s_A 1 \mid \epsilon$$

Step 2: Removal of the  $\epsilon$  rules

$$N \rightarrow S$$

$$S \rightarrow s_A s_B \mid s_A$$

$$s_A \rightarrow 01$$

$$s_B \rightarrow 0s_A 1$$

Step 3: Removal of unit rules

$$N \rightarrow SAS_B | 01$$

$$S \rightarrow S_A S_B | 01$$

$$S_A \rightarrow 01$$

$$S_B \rightarrow 0S_A1$$

Step 4: Splitting rules into Parts.

$$N \rightarrow SAS_B | 01$$

$$S \rightarrow SAS_B | 01$$

$$S_A \rightarrow 01$$

$$S_B \rightarrow 0S_c$$

$$S_c \rightarrow S_A1$$

Step 5: Replacing terminals with variables

$$N \rightarrow S_a S_b1$$

$$S \rightarrow S_a S_b1$$

$$S_A \rightarrow x y$$

$$S_B \rightarrow x S_c$$

$$S_c \rightarrow A y$$

$$x \rightarrow 0$$

$$y \rightarrow 1$$

$$5.) \quad x = 01101y \\ y = 01x01x1\varepsilon$$

The four-tuple for this CFG would be

$$V = \{x, y\}$$

$$\Sigma = \{0, 1\}$$

$$R = \{x \rightarrow 01101y,$$

$$y \rightarrow 01x01x1\varepsilon\}$$

$$S = x$$

$$SO \rightarrow (\{x, y\}, \{0, 1\}, \{x \rightarrow 01101y, y \rightarrow 01x01x1\varepsilon\}, x)$$

$$6.) \quad V = \{R_1, R_2, R_3\}$$

$$\Sigma = \{0, 1, \varepsilon\}$$

$$R = \{R_1 \rightarrow 0R_1, R_1 \rightarrow 1R_2, R_2 \rightarrow 0R_3, R_2 \rightarrow 1R_3, \\ R_2 \rightarrow \varepsilon, R_3 \rightarrow 0R_3, R_3 \rightarrow 1R_3\}$$

$$S = S_1$$

The Four tuple is:

$$(\{R_1, R_2, R_3\}, \{0, 1, \varepsilon\}, \{R_1 \rightarrow 0R_1, R_1 \rightarrow 1R_2, R_2 \rightarrow 0R_3, \\ R_2 \rightarrow 1R_3, R_2 \rightarrow \varepsilon, R_3 \rightarrow 0R_3, R_3 \rightarrow 1R_3\}, S_1)$$
